glTF is pumping! Godot is active, two Khronos meetings. Seems like things are gaining momentum. Gary and Aaron tasked with getting notes going, or at least activating SeaVoice during meetings.

Recursive structures ... composable metaverse

Composable means a collection of things together, can work together or on their own

Advice: Get a use case or an example, otherwise it's too fluffy. Need to have focus!

Conversation on omi-general about decentralized social graph system, for linking friends across different social platforms, probably using ATProto, inspired by <https://tangled.sh/>

Also: mutable torrents: it sounds like an interesting bit of infrastructure to create composable multi-user 3D worlds. I heard about them in another discord where torrenting has recently been implemented into a godot addon and the developer showed interest in it.

mutable torrents allows an author (or authors) to "[publish](#)" new content to an existing torrent, thereby adding updates to that torrent. the author(s) use a private key(s) to change the contents..
