1. Stock Blender lets you attach arbitrary custom properties to objects:

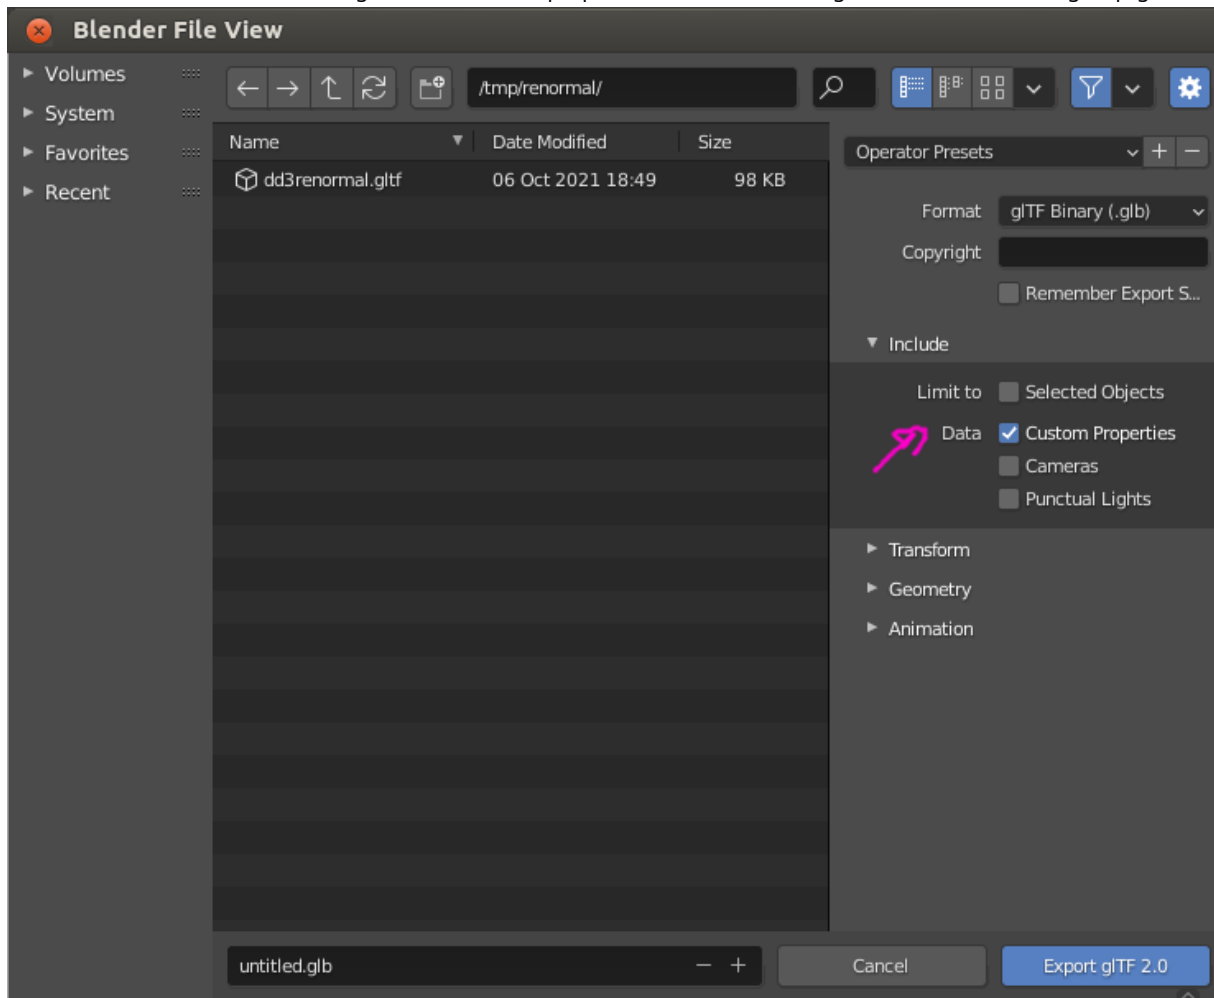

2. Once defined, those properties show up (and can be adjusted) right within information panel:

3. During glTF export there is an "Include Custom Properties" option:

4. Custom properties are reflected as `extras` on the glTF node:

```
{
  "asset" : {
    "generator" : "Khronos glTF Blender I/O v1.5.17",
    "version" : "2.0"
  },
  "scene" : 0,
  "scenes" : [ {
    "name" : "Scene",
    "nodes" : [ 0, 1, 2 ]
  } ],
  "nodes" : [
    {
      + "extras" : {
      +   "prop" : 1
      + },
      "mesh" : 0,
      "name" : "Cube"
    },
    {
      "name" : "Light",
      "...": "..."
    }
  ]
}
```
