

Proposed conversation: Legacy of the metaverse: How do we build this in? #505

indiebio started this conversation in Ideas

indiebio last week Maintainer

Cheeky alternative title: "Interoperability after the apocalypse"

(like we have been having in Spaces, but choose a better way to do this. E.g. Youtube stream that can bridge to Discord?)

Participants:

Open to all, but by special invite: (please suggest)

- Keyframe (also ask to suggest others?)
- Debian people are all about legacy, find out who wants to join from there
- ...

How do we make sure our assets, virtual worlds, games ... can still be accessed 10 years from now? How about 300 years from now?

Relevant: [File over app](#)

This is likely with particular focus on visual assets / spatial computing?

Components to consider:

- File format
- Storage
