Inspiration:

[Niantic](#)[Emergent games](#)

Emergent games refer to games that exhibit behaviors or properties that arise from the interactions and combinations of individual elements, rather than being predetermined by the game design itself. These games often feature complex systems, player agency, and adaptability, allowing for unique and dynamic gameplay experiences to emerge.

Can we say emergent game + location based game = pervasive game?
where pervasive game means something like games that extend beyond the traditional notion of a game space, often incorporating everyday environments, objects, and social interactions into the gameplay experience. They tend to blur the boundaries between the game world and the real world, creating immersive experiences that engage players in unique ways.
