This week's meeting will happen in-world in hyperfy, <https://hyperfy.io/omigroup> where we will have a demo of jin's work on converting the community meeting recordings to a "memory palace" through the use of AI. This is in the context of making the wealth of knowledge from our public community meetings more accessible.

This workflow of course also raises issues about ethics and privacy, for which we will have a guided community event soon. Join s or get in touch if this interests you.

(rest of agenda in draft and will likely stand over to the next meeting, on 12 June)

Ongoing discussions:

"The LF Formation team is discussing the ideas for partnership. I'll keep you posted on next steps, likely they'll want to meet with you and members of OMI."
