2024-05-29 Weekly Meeting 161 Notes/Agenda #471

indiebio started this conversation in **Weekly Meetings**

indiebio 4 days ago Maintainer

from last week:

get OMI more of a presence in V-Sekai, Mozilla Hubs

working group update: glTF gravity was merged into the main repo

media group is progressing - have interviews recorded in world and published on podcasts / video channels

MSF: meeting was well received, a potential time-saver

Keyframe met with VirtFrame - virtual world in Spain

Keyframe is part of Nvidia Inception programme, has 100k \$ worth of AWS GPU credits. Reach out if

<https://www.nvidia.com/en-us/startups/>

indiebio met with AIR centre, interested in "virtual natural systems". Specifically weather forecasting and nowcasting - still early days.

indiebio and knev applying for an OGC digital twin interoperability pilot

https://portal.ogc.org/files/?artifact_id=108023

indiebio's research looking to go in the direction of post-digital social systems.

mtv adds:

<https://earth.nullschool.net/> visualizes weather data...

Twitter space / in world show and tell about jin's work on AI'ing the meeting posters - next week this time.

Do a dry-run the day before, working publicity meeting on Twitter Spaces to test it out.

fun find: <https://glue.work/>, but now bankrupt

mtv from [virtual worlds museum Discord channel](#):

Would it make sense to build the world as a gltf scene that can be theoretically downloaded and imported into any VW that supports it?

The current master VWM.gltf could be easily maintained on github.

It could feature OMI extensions, other open standards, it could be the open standard 'kitchen sink' application that we have chatted about occasionally in the weekly meeting.

I imagine a plug-in that broadcasts liveness, so visitors can choose to explore on their own or join an existing VWM instance where they might meet other visitors and go on virtual adventures with the VWM as a starting place.
