## MSF POG approved

Next steps included.

MSF Standards Register [haudiobe.ts@googlemail.com](mailto:haudiobe.ts@googlemail.com)

Tue, Jun 27, 6:45 AM (10 days ago)

to jesse, robert, evo, cperey, humbletim, me, tsto, tse

Dear colleagues,

Thanks for submitting the POG information.

We have accepted "Metaverse Interoperability Community Group (Open Metaverse Interoperability Group, OMI)" as a MSF PoG according to our procedures [here](#).

The list of approved POGs is published on our web site and will gradually be updated over time. We will also offer the ability to change information of your POG, an advanced register system is under development.

Meanwhile, to initiate the submission of Standards-related Publications and Projects (SPPs), we have created an online spreadsheet for each approved POG, yours is here. Write access is restricted to your Designated Representatives in to. This is a temporary solution and a more user friendly and advanced system is currently under development. However, we would like to invite you to fill in selected SPPs with all the requested metadata. We will then review the data, and if appropriate and complete, add this to our database and soon also publish on our web site.

Should you have any issue on the submission, or comments on the form, feel free to respond to this e-mail or add comments to the git issue here.

Best regards,

The MSF Register Working Group

Please review and return feedback

## Metaverse Interoperability Community Group (Open Metaverse Interoperability Group, OMI)

### Description

We're focused on bridging virtual worlds by designing protocols, promoting open development activities, and leading research into collaborative frameworks for Metaverse Interoperability.

### Supplementary Information

We are one of the first, if not the first dedicated specifically to Metaverse Interoperability. Our community is diverse, global, and come from all 4 quadrants of the Metaverse. Neil Trevitt was an early member of OMI as well, and referenced OMI in the founding of MSF. We believe in MSF and hope to be an exemplar of how an org can go beyond adding your logo to the site. Call me with any questions: +1.443.510.7677 I am on Eastern US Time (-5 GMT)

## Open Collective

#376

### BLOCKED

- we were told to create a new second account under c3, and the funds could be transferred
- we created a second OC account under the new c3 fiscal sponsorship request.
- now they would like us to close the first account by "zeroing the account"
  - we are not comfortable zeroing the account, those funds would need to be held in escrow, or transferred directly from the old to the new as initially stated.
- for this reason we would fall under the "not ready to leave OSCs hosting unitl you are sure you will be approved by OCF" bucket, and they provided steps:
  - answer this question: why do we want to transition from c6 to c3?
    - we want to be able to apply for grants
    - we consist of and represent a public collective of open source collaborators.
    - action: what else, why else do we want to transition?
  - review OCFs Eligibility Requirements and these important reminders

- answer: we don't want to shut down the old one until the new one is running. We would like our little funds transferred to the new account without complication.
- action: please review those again. Are we certain? Why are we eligible?

## Monthly Receipts

---

- I need help submitting every month, it takes very little time, but it is a task that requires some consistency and discipline.
- we agreed to switch to yearly payments, so its possible this becomes and even lighter lift.
- we often wait until our cards are cancelled to finally submit our receipts.
  - Fire has volunteered to help

## New landing page?

---

As described [on issue 403](#)

Let's make it even simpler and decouple the individual working groups from the main readme. Like who are we really, what do we really do, and how can you really get involved?

---

## Introduction

---

The Open Metaverse Interoperability Group is focused on bridging virtual worlds by designing and promoting protocols for identity, social graphs, inventory, and more. Our members include businesses and individuals working towards this common goal. OMI aims to create a community of artists, creators, developers, and other innovators to discuss and explore concepts surrounding the design and development of virtual worlds.

The easiest way to try OMI protocols, is to check out our [glTF extensions](#). You can see protocols like ours in-action, on [our website](#) (scroll to the bottom and click `enter world !`) We are always seeking implementers and [collaborators](#).

Interested? We would love if you [get involved with our community](#) or [otherwise contributed](#). We hope to see you within our [working groups](#). Bring a friend!
