From a conversation on Discord and summarised in a community meeting on 5 February 2025 ([#515](#)) we are toying with three areas to focus on in the first half of 2025:

- 3D asset interoperability
- Protocol interoperability
- Social interoperability
- (what should we consider next?)

The group asked for a bsky (social platform) starter pack, which is a list of initiatives and people to follow. This page is where we can add what we find for the second category as a work in progress. Please add any resources in the comments.
