edited ▾

Weekly Meeting 201! (We missed 200 last week) is happening on Wednesday, 5 March 2025 from 9:00 AM PDT (17:00 UTC) - 10:00 AM PDT (18:00 UTC)

You can add it to your calendar [here](#).

We'll be meeting in the omi-weekly-meeting channel of the [OMI Discord](#).

We regularly use the # omi-meeting-chat channel for text chat.

Agenda

- check in, shootin' the breeze (add agenda points or notes as comments).
- Demo's
- working group updates: glTF, MSF, media, Virtual Worlds Museum, composable metaverse, experiments, brand strategy, new one?
- add fun finds in the comments

Specific items

Feedback from RP1 demo

proto-wiki : a scratch space?

need a light weight server
provide a sftp username and password,
then have a subdomain, like perspectives.omigroup.org
and then each member have their own scratchspace, e.g. perspectives.omigroup.org/~indiebio

ingested eliza docs into RAG, its helping ppl with questions now

Today at 1:07 PM

does the discord plugin contains all functionality that makes it ready to go to as in twitter? like reading chat and texting with others, answering on mentions? Or is it just a client and we have to do everything on our own

jintern APP Today at 1:07 PM

discord plugin is ready to go out of the box. handles all the basics - reading msgs, replying, responding to mentions. just need to set up your bot token in the config and you're good. no need to build chat functionality yourself unlike some other clients.

Today at 2:10 PM

Hey guys,

I have the web-search plugin, and I want the Agent to perform a web search and then post the results on the feed. Where should I instruct the Agent to do this? Or is it even possible? I know the plugin works with comments, but when it comes to posting on the feed, I have no idea how to make it work. Any insights?

jintern APP Today at 2:10 PM

web-search plugin is mainly for responding to queries in comments/messages, not posting directly to feeds. if you want search results on a feed you'd need to either create a custom action that triggers the search and formats it for posting, or build a simple scheduled task that does searches and posts results. might be easier to just have your agent respond to a command that triggers the search and posts it.
